MBR 2021

Malaysian seep data

Screen license round opportunities using trusted insight into the location and characteristics of natural seepage, indicative of active petroleum systems, with CGG's focused Malaysian data packages.

These enhanced data packages – available for all 13 of the 2021 bid round acreages – are the result of our world-leading offshore seeps and slicks detection workflows that combine cutting-edge processing, analysis and interpretation of large volumes of high-resolution satellite data. They provide the most complete and credible insight into natural seep sites to date.

CGG's Satellite Mapping team has been identifying natural seepage since the early 1990's, and our domain expertise is unrivalled. Our natural seeps data increase petroleum system knowledge, helping New Ventures and Exploration teams the world over.
